

Water

This pack is a small collection of processed sounds that feature water somewhere in them. There are 4 bubble sounds made by blowing air, via a pipe into the base of a glass vase, filled with water. One short brook sample taken from a bend where the water crosses over a small rock and carries on. Also a stone being chucked into the same brook a bit further down as a separate sample. The obligatory toilet flush :) and also a small wind up toy being able to float around a bath (occasionally bumping into the sides) until it runs out of power; and finally a mono sample of a can containing fizzy water being poured into a glass.
