

The Ocarina - SoundFont plus samples

The Ocarina is a small handheld wind instrument made of clay, two holes on the back with six on the top.

It sounds a bit like a cross between small, steam driven pipe organ that used to be attached to the old engines at fairs, and that of a recorder.

I have made a sound font that will play beyond its one octave, it will play notes infinitely all the time the keys are pressed so you can emulate a rustic pipe organ if wanted :)
